

Appearance

TTG CE4 Gallery 6.0.0 and newer automatically creates cart templates in a similar way to the creation of Publisher templates. By setting these up, you can customise the appearance of the cart page (e.g. <http://yoursite.com/cart>) to be consistent with the appearance of your galleries.

To use an exported Gallery as a template:

1. Export a new gallery.
2. Copy the gallery into the *ttg-be/templates/gallery* directory, e.g. *ttg-be/templates/gallery/my_template/*
3. In the Cart Admin settings, set the Cart Template value to the name of your template directory, e.g. *my_template*.
4. Visit <http://yoursite.com/ttg-be/cart/> to review that the change has taken effect without error.

Note: In setting up templates in this way, the URL to the template serves only as a template, and can not function as a cart-enabled gallery.
