

Large Image Presentation

The options under **Large Image Presentation** impact the viewing of full-size images in your gallery, the slideshow.

Use the **Presentation :desktop** option to access configuration options for each of them presentation types.

The gallery will use up to three different views:

- single-image HTML pages
- mobile slideshow
- desktop slideshow

It's best-practice to configure each of these views for your gallery, in the above listed order.

For example, let's say I want to use Highslide for desktop, Touch for mobile. Then I should configure my presentations in this sequence:

1. Set **Presentation :desktop** as "HTML : single-image". Click any thumbnail to access a single-image page in the preview, then configure using the subsequent options. Return to the thumbnail grid preview when finished.
2. Set **Presentation :desktop** as "Touch", then configure using the subsequent options. Set **Presentation :mobile** as "Touch".
3. Set **Presentation :desktop** as "Highslide Slideshow", then configure the options.
