

# Pagination

Allows galleries to span multiple pages. In large galleries, it is wise to paginate the gallery to reduce page loads. This is of particular importance for mobile browsers. CE4 Gallery supports up to 250 images per page, and as many pages as it takes.

When using CE4 Publisher, you may set images per page via Album Setup, and may exceed the 250 image limit should you choose.

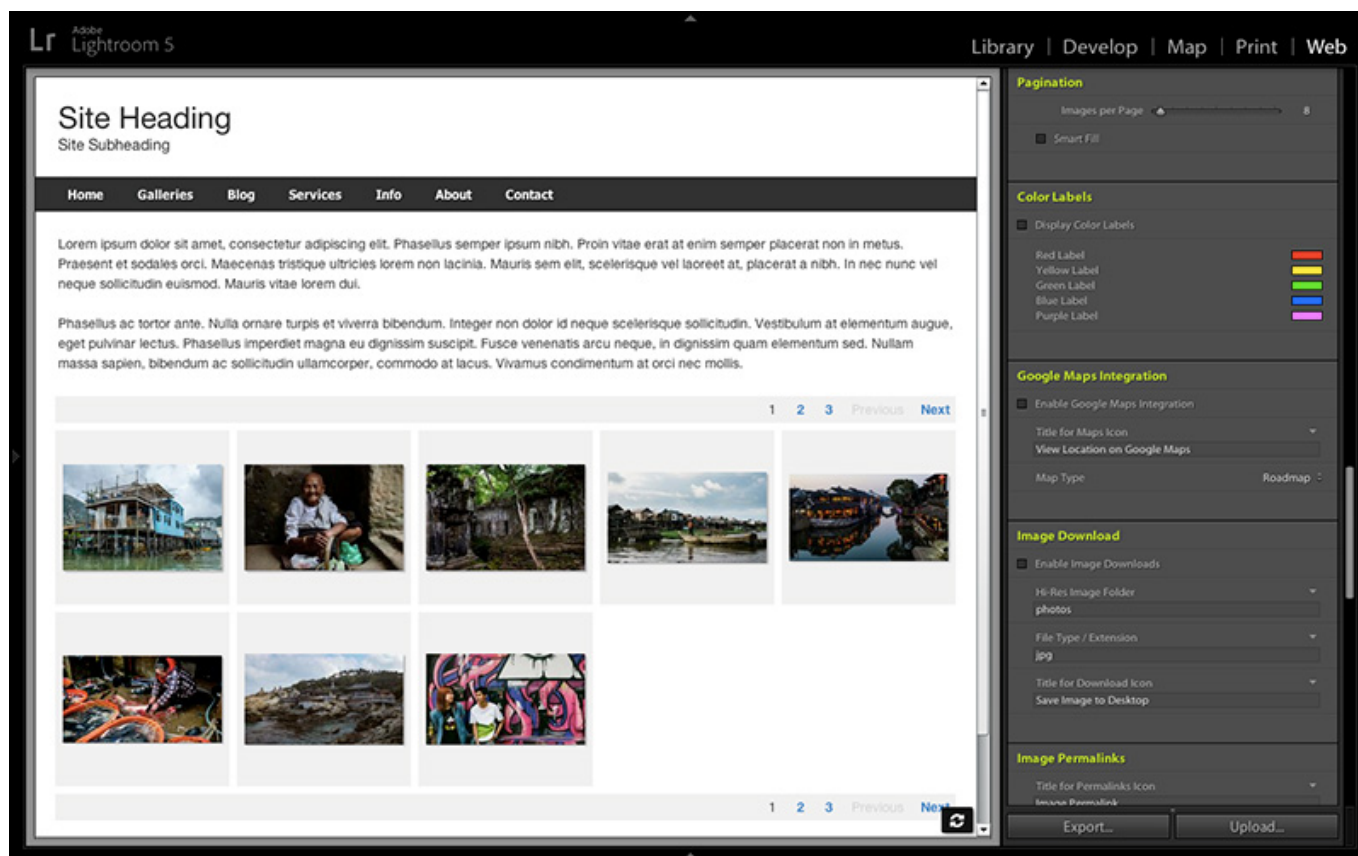

## Images per Page

Use this slider to set the maximum number of images which may appear on the page.

## Smart Fill

At full gallery width, fills out the grid's columns if there are enough images to do so.

For example, let's say you have 20 images in your gallery, that your layout is five columns wide, and that Images per Page is 8. In this case, you gallery would span three pages, and your grid (2 rows, 5 columns) would fall 2 images short of being full:

Enabling Smart Fill will fill out the last row:

The screenshot shows the Adobe Lightroom 5 interface. The main window displays a website preview with the following elements:

- Header:** "Site Heading" and "Site Subheading".
- Navigation:** Home, Galleries, Blog, Services, Info, About, Contact.
- Text:** Two paragraphs of Lorem Ipsum placeholder text.
- Image Grid:** A grid of 10 images arranged in two rows of five. The first row includes a building, a person, a forest, a lake, and a reflection. The second row includes a person, a landscape, a person, a market stall, and a person.
- Right Panel:** Contains settings for "Pagination" (Images per Page: 8, Smart Fill checked), "Color Labels" (Display Color Labels unchecked, with color swatches for Red, Yellow, Green, Blue, and Purple), "Google Maps Integration" (Enable Google Maps Integration unchecked, Title for Maps Icon dropdown, View Location on Google Maps dropdown, Map Type: Roadmap), "Image Download" (Enable Image Downloads unchecked, Hi-Res Image Folder: photos, File Type / Extension: jpg, Title for Download Icon dropdown, Save Image to Desktop), and "Image Permalinks" (Title for Permalinks Icon dropdown).
