

CE4 Publisher Changelog

v2.3.3 (2015-11-21)

- Improves handling of duplicate slugs within and between publisher instances

To update to Publisher 2.3.3:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.3.2 (2015-09-03)

- Adds support for customisation of download path. To customise download path, change the following setting to the template's setup.xml:

`<downloadPath>photos-for-download</downloadPath>`. If not provided, the default of 'photos-for-download' will be used.

- Adds support for customisation of download extension. To customise download path, change the following setting to the template's setup.xml:

`<downloadExtension>jpg</downloadExtension>`. If not provided, the default of 'jpg' will be used.

This feature requires CE4 Gallery 6.1.8 or newer.

* Adds file protection for downloads, to ensure path matches configured download path

To update to Publisher 2.3.2:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.3.1 (2015-08-04)

- Fixes filtering of CRG-enabled galleries in Search
- Fixes handling of pricing profiles in Search for templates with mixed pricing disabled. Requires CE4 Gallery 6.1.7 or newer.

To update to Publisher 2.3.1:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.3.0b (2015-07-13)

- Fixes metadata handling to significantly improve performance in publishing large albums
- Fixes handling of 'none' for watermarks in Album settings
- Increases maximum depth of Album Sets from 10 to 20

To update from Publisher 2.3.0 to Publisher 2.3.0b:

- Replace the **CE4-Publisher.Irplugin**, and restart Lightroom

To update from earlier versions of Publisher to Publisher 2.3.0:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.3.0 (2015-06-10)

- Adds support for copying over existing album settings to new album
- Adds setting to provide block text for search template, supporting Markdown.
- New Publisher admin page to set the name and path to the Top-Level Gallery page. The initial values are picked up by gallery.xml, if produced as part of a Pages installation.
- Adds support for TTG BE Administrator to view CRG-managed galleries, without logging in as client.
- The Client Management setting for an album can be set independently from the 'Enable Feedback' checkbox, so that albums can be assigned to clients that don't have feedback enabled. Assignment of client-managed/feedback-disabled albums requires CRG 6.1.0 or newer, under development.
- Adds maps support to search templates
- Automatically filter out photos from an album that do not have corresponding JPEG files on server.
- Adds support for file permissions to be managed via the TTG BE Admin page (requires TTG BE 2.0.4 or higher)
- Added Enhancements to settings page: info icon now appears on view settings page, support for Markdown and support for multi-row settings
- Empty metadata values are now no longer stored in the database, to reduce the size of the database and speed up query time.
- Fixes issue with CRG not being enabled automatically when switching from non-CRG to CRG template in album settings

To update to Publisher 2.3.0:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.2.1a (2015-05-19)

- Fixes an issue with AdobeRGB support for photos-for-download and photos-for-purchase

To update to Publisher 2.2.1a:

- Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.2.1 (2015-02-20)

- Fixes an issue with editing Album Set slugs in Lightroom
- Improves error messages for the case that Publisher can not find an album directory on the server

To update to Publisher 2.2.1:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.2.0b (2015-01-27)

- Fixes an issue that stopped keyword search from working
- Fixes an issue with editing Album Sets in Lightroom
- Fixes an issue with migrating albums from CE3 to CE4 when albums not found on the server are encountered

To update to from Publisher 2.2.0 to Publisher 2.2.0b:

- Replace the **ttg-be/publisher/application** directory
- Replace the **CE4-Publisher.Irplugin**, and restart Lightroom

To update to from Publisher 2.1.3 to Publisher 2.2.0b:

- Replace the **ttg-be/publisher/application** directory
- Log in as admin to **ttg-be/publisher/admin**

- Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.2.0 (2015-01-20)

- Adds support for CE4 Client Response Gallery
- Improved performance of Search - 1. Dropping metadata name index, 2. Delayed filling of photo metadata and renditions until page load.
- Fixes issue with embedded image metadata not being embedded when needed
- Adds support for per-rendition watermarking configuration
- Search results are now cleared when visiting /search/
- Updated TTG site links in Lightroom's Publisher info page
- Add an improved message for the error arising from attempting to publish with the Publisher instance's Default Album
- Fixes an issue with breadcrumbs on search results causing an openbasedir error message
- Fixes issue with readable Home breadcrumb name failing to be created in some scenarios
- Remove extra closing </div> tag from search page
- Added back-end support for iOS app

To update to from Publisher 2.1.3 to Publisher 2.2.0:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.1.3 (2014-09-02)

- Updates the handling of thumbnails-for-mobile for compatibility with Gallery 6.1.0

To update to from Publisher 2.1.2 to Publisher 2.1.3:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.1.2 (2014-08-21)

- Fixed an issue with missing 'thumbnails' renditions for some templates, that impacted Auto Index and Cart
- Search now omits albums and photos that no longer exist in the file structure

To update to from Publisher 2.1.1 to Publisher 2.1.2:

- Replace the **ttg-be/publisher/application** directory

- Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.1.1 (2014-08-15)

- Added support for AdobeRGB colorspace for photos-for-download and photos-for-purchase renditions (requires Gallery 6.0.5 or newer)
- Added experimental support for retina-friendly thumbnails
- Automatically read in changed album and album set template settings when updating albums and album sets, without the need to change selected template
- Improvements to the handling of updating albums and album sets when the albums and album sets are in an inconstent state on the server
- Fixes case-sensitivity with handling jpg file extension in single image pages
- Fixes issue with cart icons not displaying on large images in search results (requires Gallery 6.0.5 or newer)
- Improved .htaccess files so that albums can be tested on WAMP servers
- Improved handling of Auto Index templates residing in templates/gallery and Gallery templates residing in templates/autoindex

To update to Publisher 2.1.1:

This release requires an update to TTG BE 2.0.2, with files included in your available Publisher downloads.

1. Update TTG BE with the following steps

- Replace **ttg-be/admin** and **ttg-be/framework** with the files in the included CE4-TTG-BE-202.zip file
- Log in as admin to ttg-be/admin

IMPORTANT NOTE : Do NOT replace the entire ttg-be directory! Doing so will cause publisher to lose ALL settings!

2. Update TTG Publisher:

- Replace the **ttg-be/publisher/application** directory
 - Log in as admin to **ttg-be/publisher/admin**
 - Replace the **CE4-Publisher.Irplugin**, and restart Lightroom
-

v2.1.0 (2014-08-05)

- Improved handling of templates, so that Publisher only attempts to use the correct type of template in the case that Auto Index templates had been incorrectly placed in templates/gallery and vice versa
- Improved handling of Album and Album Set creation, so that there are various re-attempts at creating albums should the initial creation fail.
- Fixed an issue where multiple albums with the same slug could exist on the server if an earlier

album had been deleted from Lightroom but left on the service

- Added support for the cart in search results
- Added keywords to the CE3-CE4 migration tool
- Fixed an issue where considerably older Album Sets were being migrated as Albums
- Reduced the maximum number of listed migrated galleries to 15, to prevent the 'OK' button from not being reachable
- Added support for localisation in Pagination links
- Changed handling of passwords so that the open lock token are kept in the session rather than in cookies, reducing network traffic between requests
- Fixed an issue with single photo page passwords not working correctly with the containing Album or Album Set passwords
- Fixed an issue in storing the image title to be used with TTG Cart
- Fixed an issue where searching for a number resulted in a search for the number 0
- Fixed an issue with special characters used as the Galleries name causing errors
- Fixed issue with realpath causing errors on some servers

To update to Publisher 2.1.0:

1. Replace **ttg-be/publisher/application**
2. Replace **ttg-be/publisher/search**
3. If using Search on your site, copy **ttg-be/publisher/search** to the location that you already have search installed
4. Log in as admin to **ttg-be/publisher/admin**
5. Replace the **CE4-Publisher.Irplugin**, and restart Lightroom

v2.0.3a (2014-07-18)

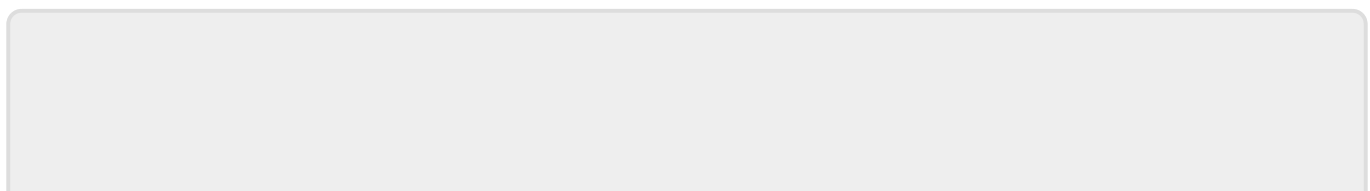

- Fixes an issue where .DS_Store files within the Watermarks directory raised an error
- Fixes an issue with pagination raising an error for single photo pages

To update to Publisher 2.0.3a:

1. Either replace the entire **ttg-be/publisher/application** folder, or just the file `ttg-be/publisher/application/models/Album.php` with that from the zip file.
2. Replace the **CE4-Publisher.Irplugin**, and restart Lightroom

v2.0.3 (2014-07-16)

- Public release.
